Press Release

Cryptomator's Brand-New iOS App Released

Cryptomator 2.0 Is Now Available /// Integration in Files App for Better User Experience /// Freemium Usage Now Possible

Bonn, Germany – December 21, 2021 – After a successful beta phase with over 2,300 testers via TestFlight, the new major version of Cryptomator for iOS is ready for launch. With the release today, users can enjoy a completely new app written in Swift with several new features.

One of the main new features is the complete integration into Apple's Files app. The vaults are directly accessible from there. It is now also possible to save encrypted files directly to a Cryptomator vault within apps such as Word. In general, Cryptomator 2.0 supports all features available in the Files app incl. long-requested features such as thumbnails, grid view, and swiping through images.

With the beta version released in June, the whole Cryptomator family is now fully open-source. This also means that the new iOS app is available to the entire developer community. "We were waiting for this moment for a long time and it has finally arrived," says Tobias Hagemann, co-founder and CEO of Skymatic. "Not only is the iOS app now open-source instead of open-core but it's also available for free for the first time."

The new app is available as a freemium app; this means that in the free version, vaults can be accessed in "read-only mode". If users only need quick access to their vaults on the go, which were created with the Desktop version, then this is the perfect "companion" app. The full version of Cryptomator, which grants write access to the vaults, can be unlocked after a 30-day trial for a one-time fee of $11.99.

For users of the old app, the upgrade to Cryptomator 2.0 is, as promised, free of charge. To enable a smooth transition, the previous app will still be available in the App Store for a short period.

About Skymatic

Skymatic helps companies and private users to achieve maximum security in the digital world by developing user-friendly encryption technologies. The company offers the software Cryptomator as well as cryptographic libraries, customized solutions, and consulting services. Cryptomator was awarded the *CeBIT Innovation Award for Usable Security and Privacy* by the Ministry of Education in 2016.
